

# Our presence and scale

## GRI 2-1

The Group leverages the opportunities stemming from its well-established presence spanning five continents and a strong operational hub in Siberia, combining the assets of both its Metals and Power segments.

The Group's Metals segment benefits from well-diversified sales channels, enabling efficient access and operations across all key aluminium markets. The Group's market research and analytical capabilities contribute significantly to its long-term operational and financial planning.

The Power segment manages Siberia's largest and most cost-efficient network of power plants, providing efficient and reliable service to its key customers in the region, including the largest smelters operated by our Metals segment.

# Nº 1

En+ Group is the largest producer of low-carbon aluminium globally outside of China

<sup>1</sup> Eurallumina in Italy is mothballed.

<sup>2</sup> Alcon in Nigeria is mothballed.

<sup>3</sup> Excluding Boguchany Aluminium Smelter (BoAZ), a joint 50/50 project of RUSAL and strategic partner.

<sup>4</sup> Eurallumina in Italy is mothballed. Since March 2022, production at Nikolaev (Ukraine) has been suspended. Moreover, the Company owns a 20% interest in Queensland Alumina Limited, located in Australia. Since April 2022, the Australian government has banned alumina and bauxite exports to Russia.

<sup>5</sup> Including the capacity of Queensland Alumina Ltd attributed to RUSAL.

<sup>6</sup> From external customers.

<sup>7</sup> Including Onda HPP with the installed capacity of 0.08 GW (located in the European part of Russia, leased to RUSAL).

<sup>8</sup> Excluding Onda HPP.
